edison black wax

## Edison Black Wax

In 1902 both Edison and Columbia issued molded cylinders.

These cylinders were formed in a mold and were so pressed to give a much higher fidelity to the recording compared to the rather dull sounds of the brown wax. Being molded also made the cylinders louder and let them last longer than their brown wax predecessors.

Although they are referred to as black wax, the cylinders were not really made of wax, but more of a soap compound. They were jet black in color.

The cylinders had 100 grooves per inch and played at 160 R.P.M. and usually played for about 2 minutes. The first molds were made from a gold sputtering of the wax master, and were called "Gold Molded" by the Thomas Edison Company.

In 1908 Edison issued 4-minute black wax cylinders at 200 grooves per inch and produced these side by side with the 2-minute variety until the arrival of the Blue Amberol Cylinders of 1912.

**What you will hear on this site are cylinders and records played on original equipment-- no filters, no mixing and no digital alteration. Nothing except for the original recording played on original "turn of the century" equipment.**

The content of these recordings reflect a period of our history. They do not reflect the views of Edison Township, [www.edisonnj.org](http://www.edisonnj.org), [menlopark.edisonnj.org](http://menlopark.edisonnj.org), The Thomas Alva Edison Memorial Tower and Menlo Park Museum or any of the preceding employees. Please enjoy this look back in history.

### [Bouncer At The Blazing Rag](#)

2:05 - 1902

Len Spencer and Gilbert Gerard

*This bizarre music hall scene gives a slight flavor of what it was like on the music hall circuit circa 1902.*
