 This code works with winspice.

No Function generator is complete with out a sinewave output. It may not have low distortion, but putting a triangle wave form at the right magnitude into a standard OTA will generate something that looks close to a sine wave.

```

* IABC0 = .3mA->0
* OUT0
* 200PF
* C0
* INP1
* R1
* IABC1=500uA0
* R2 12k
* INN1
* B OTA1
* OUT2
* R3 500
* B OTA2
* R4 5K
* IABC1=500uA0
* .OPTIONS GMIN=1e-18
* V_Iabc0 VIABC0 0
* B OTA0 OUT0 0
* C0 OUT0 0
* B_BUF0 INN1 0
* V_Iabc1 VIABC1 0
* B OTA1 INP1 0
* R1 INP1 0
* B_BUF1 VOUT1 0
* Cstray INP1 0
* R2 INN1 INN2 12k
* R3 INN2 0
* B OTA2 OUT2 0
* R4 OUT2 0
* .tran .1u 1m 0 .1u UIC
* .control
* run
* set pensize = 2
* plot v(inp1) v(out0) v(out2)
* .endc
* .end
* .end
  
```

It would be something too build such a function generator today in BiCMOS. Transistors are far smaller and far faster and have almost twelve orders of magnitude of dynamic range compare to the six orders of magnitude for the LM13600. Both AM and FM are available. And all this could be

**done completely inside silicon.**
